# Junicode

## the font for medievalists

*list of encoded characters*

for version 2

This document lists the characters in Junicode 2 that can be entered from the keyboard—that is, those with Unicode code points. Many other characters are accessible via OpenType features—for example, small caps, petite caps, and most ligatures. Note that characters with code points beginning with hexadecimal digits E and F belong (with few exceptions) to the Private Use Area. Almost all of these characters can be produced in a more accessible way via OpenType features, for which see *Specimens and User Manual*.

Characters in the Private Use Area lack Unicode names, but they are here assigned to classes: **(1) precomposed** consisting of a base character and one or more diacritics; **(2) overline** letter with medium-high or high overline; **(3) ligature** two or more letters conjoined; **(4) variant** variant shape of Unicode-encoded character; **(5) fleuron** a floral ornament; **(6) nonspacing mark** diacritic or abbreviation sign; **(7) number** variant form of a character used as a numeral; **(8) duplicate** having a recently assigned Unicode code-point (such characters are deprecated and will eventally be removed from the font); **(9) punctuation**; **(10) currency and weight**; **(11) metrical symbol**.
